                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostagiandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of thibiting the expression of mPGES-1 in cells or tissues, and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antidiabetic, immunomodulator, cardiant, neuroprotective, vasotropic, antiinflammatory, neuroprotective, nootropic, antianthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's condition associated with mPGES-1 e.g., inflammation, Alzheimer's methodisease, arthritis diabetes, cancer, ischaemia or reperfusion injury, or
                                                                                                                                                                                                                                                                                                                                                                  chimeric; antisense oligonucleotide; phosphorothicate; human;
                                                                                                                                                                                                                                                                                                                                                                                                          Human mPGES-1 chimeric antisense oligonucleotide SEQ ID NO:208.

                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                           human mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal thaving a disease or condition associated with mpGES-1. Chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischemia or reperfusion injury, or ophthalmological, disease, arthritis, diabetes, cancer, ischemia or reperfusion injury, or

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin 22 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to 9344.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid encoding inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antisinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antiarthrities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; cardiovascular disorder; neurological disorder;

                                      The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibite its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric
                                                                                                                                                                                                                                                                                                                            New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.ginflammation, Alzheimer's disease, arthritis, diabetes, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  microsomal prostaglandin E2 synthase; mPGES-1; mPGES-1 inhibitor; microsomal prostaglandin E2 synthase inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antinflammatory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation;

                                                                                                                                                                                                                                                                                                                                                    e.g.,
```

cardiant,

New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating  $e\cdot\hat{c}$ 

e.g.,

The human mpGES-1 gene is located on chromosome 9, more specifically to 9d34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a chimeric antisense oligonucleotide charactered to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to compare the present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 by targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid encoding chimbits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal cardispance or condition associated with mpGES-1. whose sequence compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, antidiabetic, immunomodulator, antiarthritic, vasotropic, antidiabetic, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's contribution associated with mpGES-1 e.g., inflammation, Alzheimer's contribution in the contribution or reperfusion injury, or condition associated with mpGES-1 e.g., inflammation, Alzheimer's contribution in the contribution of t

                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                              The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin R2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, antiinflammatory, neuroprotective, nootropic, antiathabetic, immunomodulator, cardiant, neuroprotective, antisinflammatory, neuroprotective, nootropic, antiathabetic, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                          Matches

CC targeted to human microsomal prostaglandin 82 synthase (mpGES-1). The Chuman mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC inhibits its expression; (2) a method of inhibiting the expression; (2) a method of treating an animal CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC maving a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antishabetic, immunomodulator, cardiant, neuroprotective, antiarthritic, vasotropic, CC ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC ophthalmic, immunological, cardiovascular or reperfusion injury, or OC ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunomodulator; cardiant; neuroprotective; antiinflammatory;

MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, antiarthritic, vasotropic, antinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                  microsomal prostaglandin E2 synthase; mpGES-1; mpGES-1 inhibitor; microsomal prostaglandin E2 synthase inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; neuroprotective; noctropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; secardiovascular disorder; neurological disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antidiabetic, immunomodulator, cardiant, neuroprotective, antiantiflammatory, neuroprotective, nootropic, antianthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpG85-1). The human mFGES-1 gene is located on chromosome 9, more specifically to 9334.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mFGES-1, which specifically hybridise with the nucleic acid mFGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mFGES-1 in cells or tissues, and (3) a method of treating an animal having a disease or condition associated with mFGES-1. MFGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisense compounds have cytostatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e. inflammation, Alzheimer's disease, arthritis, diabetes, cancer or

The human mPGBS-1 gene is located on chromosome 9, more specifically to CC having a sequence comprising 8-30 becarribes: (1) antisense compounds, compGES-1, which specifically hybridise with the nucleic acid encoding compGES-1, which specifically hybridise with the nucleic acid encoding compGES-1, which specifically hybridise with the nucleic acid encoding compGES-1 in cells or tissues, and (3) a method of inhibiting the expression of compGES-1 in cells or tissues, and (3) a method of treating an animal compGES-1 in cells or tissues, and (3) a method of treating an animal compGES-1 in cells or condition associated with mpGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidabetic, immunomodulator, cardiant, neuroprotective, cardiant, neuroprotective, composition antisarthritic, vasotropic, cophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound composition associated with mpGES-1 e.g., inflammation, Alzheimer's composition associated with mpGES-1 e.g., inflammation, Alzheimer's composition associated with mpGES-1 e.g., inflammation, Alzheimer's composition for treating a disease or contributed in the composition or reperfusion injury, or composition in the composition of the compositio

CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The Chuman mpGES-1 gene is located on chromosome 9, more specifically to 9934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 and CC antisiabetic, immunomodulator, cardiant, neuroprotective, antiinflammatory, neuroprotective, nootropic, antiinflammatory, neuroprotective, nootropic, antiinflammatory, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IL-5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ę
```

Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.

Claim 2; SEQ ID NO 1845; 174pp; English

The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II) -5 receptor, CCR1, CCR3, Ectaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDB4 A, PDB4 B, PDB4 C or PDB4 D. The invention class of the screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the prevention and/or treatment of a respiratory or lung disease. The coligonucleotides are useful for reducing or inhibiting expression of a gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CCR1, CCR3, Ectaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, cryptase b, PDB4 A, PDB4 C, or PDB4 D. The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The respiratory or lung disease is associated with hyper-responsiveness to and/or increased levels of, adenosine and/or levels of adenosine a receptor or lung disease. The receptor for a respiratory or lung disease. The receptor inflammation or an inflammatory disease. The respiratory or lung disease. from airway inflammation, allergy, asthma prosis (CF), chronic obstructive pulmonary asthma, respiration,

                                                       The invention relates to an antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR), where the antisense compound specifically hybridizes with and inhibits the expression of FXR. The composition and methods are useful for inhibiting the expression of FXR (Farnesoid X receptor) in cells or tissues, or for treating diseases or conditions associated with FXR, such as diabetes, immunological disorders, cardiovascular disorders, e.g. dyslipidemia and its symptoms, atherosclerosis, low HDL (high density lipoprotein), elevated LDL (low density lipoprotein) or hypertrolesterolemia, gallstones, hypertrajlyceridemia, obesity, neurological disorders, or ischemia/reperfusion injury. In addition, the composition is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence corresponds to an antisense oligonucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    neuroprotective; vasotropic; antisense; gene therapy; Farnesold X receptor; diabetes; immunological disorder; cardiovascular disorder; dyslipidemia; atheroscleric; high density lipoprotein; low density lipoprotein; hypercholesterolemia; gallstones; hypertriglyceridemia; obesity; neurological disorder; ischemia; reperfusion; diagnostics; prophylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense oligonucleotides useful for modulating expression of Farnesoid X Receptor (FXR) or for treating diseases associated with FXR, e.g. diabetes, immunological disorders, cardiovascular disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                               CC 3' end does not contain seven or more bases that are perfectly matching CC except one mismatch to the 3' end sequence of the first primer or the second primer, the first primer at its 3' end does not contain six or CC more bases that are perfectly matching to a sequence anywhere of the CC does not contain eleven or more bases that are perfectly matching except one mismatch to a sequence anywhere of the first primer at its 3' end CC does not contain eleven or more bases that are perfectly matching except one mismatch to a sequence anywhere of the first primer or the second CC primer. The method is useful for designing primers for simultaneous amplification of target DNA fragments in a single multiplex polymerase CC chain reaction. It is also useful in the identification of multiple genes related to multifactorial diseases, the genome-scale detection of genetic alterations, the studies in pharmacogenetic reactions, the genetyping CC enteric polymorphisms in a large population, the gene expression CC profiling in various samples and high throughput genetyping technologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 1198
ADO10707/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        뭐
                                                                                                                                                              The invention describes a reagent (I) comprising a particle bound to at least one Raman label and a specific binding member, where the Raman label can be activated to provide a surface-enhanced Raman scattering (SERS) effect or comprising a specific binding member having two or more different Raman labels bound to it. Also described are: a test kit (II), comprising (I) in one container and a silver, gold or copper Raman enhancer stain in another container; and a fibre optic detection device (III), having a bundle of optical fibres terminating with ends of the optical fibre, where a several of the optical fibres have (I) located at the ends of the optical fibre. (I) is useful for detecting for the presence or absence of one or more target analytes having at least two binding sites; detecting the presence of the nucleic acid having at least two portions; and for screening one or more molecules to determine whether the molecule is a ligand to one or more specific receptors. This sequence represents an oligonucleotide associated with the SERS-based detection analyte detection method.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a compound targeted to a nucleic acid molecule encoding B7H, where the compound specifically hybridises with the nucleic acid molecule encoding B7H and inhibits the expression of B7H. The compound is useful for modulating the expression of B7H. It is also useful for diagnosing or treating diseases associated with expression of B7H, e.g. an autoimmune disease. The present sequence represents a mouse
   cytostatic; antisense therapy; cytokine-inducible kinase; cytokine-inducible kinase inhibitor; antisense technology; cytokine-inducible kinase expression; hyperproliferative d antisense oligonucleotide; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New compound targeted to a nucleic acid molecule encoding B7H and inhibits expression of B7H, useful for modulating the expression or for diagnosing or treating, e.g. autoimmune disease.
                                                                                                                                                             Human cytokine-inducible kinase antisense oligonucleotide

The invention describes a compound 8-80 nucleobases in length targeted to compectation describes with the nucleic acid molecule encoding Cytokine-inducible kinase. The compound cinducible kinase (which comprises a sequence of 2169 bp fully defined in the specification) and inhibits the expression of Cytokine-inducible kinase in cells or tissues, comprising contacting the cells or tissues with the new compound so that the expression of Cytokine-inducible kinase in cells or tissues, comprising contacting the cells or tissues with the new compound so that the expression of Cytokine-inducible kinase is inhibited; a method of screening for a modulator of Cytokine-inducible kinase, comprising contacting a preferred target segment of the nucleic acid encoding Cytokine-inducible kinase, and clantifying one or more modulators that modulate the expression of Cytokine-inducible kinase, and clantifying one or more modulators that modulate the expression of Cytokine-inducible kinase, and clantifying the presence of Cytokine-inducible kinase in a sample using at least one of the primers or probe comprising the compound; and a method for identifying an animal having a disease or condition associated with Cytokine-inducible kinase, comprising administering to the animal a therapeutic or prophylactic comprising administering to the animal a therapeutic or prophylactic expression of Cytokine-inducible kinase is inhibited. The antisense oligonucleotide is useful for inhibiting the expression of Cytokine-inducible kinase is inhibited. The antisense oligonucleotide is useful for inhibiting the compound set hat expression of Cytokine-inducible kinase is inhibited. The antisense oligonucleotide is useful for inhibiting the compound set has expression of Cytokine-inducible kinase is inhibited. The antisense associated with the kinase arroression of cytokine and a method of treating the compound as the kinase arroression of cytokine-inducible kinase is inhibited.
                                                                     diagnostics, p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense oligonucleotides useful for modulating Cytokine-inducible kinase expression, useful for diagnosing, preventing or treating conditions associated with aberrant kinase expression e.g.
                                                                                                                                                  treat diseases associated with the kinase expression, such as hyperproliferative disorders. In addition, the compound is used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 15; SEQ ID NO 66; 56pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
The invention describes a compound 8-80 nucleobases in length targeted to CC a nucleic acid molecule encoding Cytokine-inducible kinase. The compound CC specifically hybridises with the nucleic acid molecule encoding Cytokine-inducible kinase (which comprises a sequence of 2169 bp fully defined in the specification) and inhibits the expression of Cytokine-inducible kinase in cells or tissues, comprising contacting the CC (ytokine-inducible kinase in cells or tissues, comprising contacting the cells or tissues with the new compound so that the expression of Cytokine-inducible kinase is inhibited; a method of screening for a modulator of Cytokine-inducible kinase, comprising contacting a preferred target compound to the nucleic acid encoding Cytokine-inducible kinase, and comprising contacting a preferred target component contacting one candidate modulators of Cytokine-inducible kinase, and contacting a preferred target compression of cytokine-inducible kinase, and component contacting a preferred target component contacting and contacting a preferred target component contacting and con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytostatic; antisense therapy; cytokine-inducible kinase; cytokine-inducible kinase inhibitor; antisense technology; cytokine-inducible kinase expression; hyperproliferative disorder; human; antisense oligonucleotide; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense oligonucleotides useful for modulating Cytokine-inducible kinase expression, useful for diagnosing, preventing or treating conditions associated with aberrant kinase expression e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-AUG-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in a sample using at least one of the primers or probe comprising the nucleotide sequences as mentioned in the specification; a kit or assay device comprising the above compound; and a method of treating an animal having a disease or condition associated with Cytokine-inducible kinase, comprising administering to the animal a therapeutic or prophylactic amount of the compound so that expression of Cytokine-inducible kinase is inhibited. The antisense oligonucleotide is useful for inhibiting the expression of Cytokine-inducible kinase in cells or tissues to prevent or treat diseases associated with the kinase expression, such as hyperproliferative disorders. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence represents a human cytokine-inducible kinase antisense oligonucleotide.
                       New compounds, particularly oligonucleotides targeted to a nucleic encoding kallikrein 6, useful for treating diseases associated with kallikrein 6, e.g. hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             kāllikrein 6; hyperproliferative disorder; kallikrein 6 expantisense technology; human; antisense oligonucleotide; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytostatic; kallikrein 6 modulator; antisense therapy; gene therapy; kallikrein 6; hyperproliferative disorder; kallikrein 6 expression;

The invention describes a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with, a nucleic acid molecule encoding kallikrein 6, and inhibits the expression of kallikrein 6. Also described are: a method for inhibiting the expression of kallikrein 6 in cc cells or tissues by contacting the cells or tissues with the compound so that expression of kallikrein 6 is inhibited; a method for screening a cc modulator of kallikrein 6 by contacting a preferred segment of a nucleic acid molecule encoding kallikrein 6 with one or more candidate modulators of kallikrein 6, and identifying one or more modulators of kallikrein 6 cexpression which modulate the expression of kallikrein 6 for screening a company of the primers or probes given in the specification; a kit or assay device comprising the presence of company that it is a maintal having a disease or condition associated with by kallikrein 6 administering to the animal a therapeutic or prophylactic amount of the compound so that expression of kallikrein 6 is disease or condition associated with kallikrein 6, such as a composition and methods are useful for treating composition and methods are useful for treating the presence of composition associated with kallikrein 6, such as a composition associated with kallikrein 6, such as a composition associated with kallikrein 6. This sequence composition and methods are useful in research and composition and methods are useful for treating the presence of composition and methods are useful in research and composition associated with kallikrein 6. This sequence represents a human kallikrein 6 antisense oligonucleotide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with, a nucleic acid molecule cencoding kallikrein 6, and inhibites the expression of kallikrein 6 in 6. Also described are: a method for inhibiting the expression of kallikrein 6 in CC cells or tissues by contacting the cells or tissues with the compound so that expression of kallikrein 6 by contacting a preferred segment of a nucleic condulator of kallikrein 6 by contacting a preferred segment of a nucleic condulator of kallikrein 6 by contacting a preferred segment of a nucleic condulator of kallikrein 6 with one or more candidate modulators of kallikrein 6, and identifying one or more modulators of kallikrein 6 cexpression which modulate the expression of kallikrein 6 a dispostic method for identifying a disease state by identifying the presence of kallikrein 6 in a sample using any of the primers or probes given in the specification; a kit or assay device comprising the compound; and a compositication; a kit or assay device comprising the compound; and a composition of treating an animal having a disease or condition associated with by kallikrein 6 amount of the compound so that expression of kallikrein 6 is inhibited. The compound, composition and methods are useful for treating the disease or condition associated with kallikrein 6, such as a disease or condition associated with kallikrein 6. Such as a disease or condition associated with kallikrein 6. This sequence represents a human kallikrein 6 antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                               밁
                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                        The invention describes a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with, a nucleic acid molecule cancoding kallikrein 6, and inhibits the expression of kallikrein 6 in CC described are: a method for inhibiting the expression of kallikrein 6 in CC cells or tissues by contacting the cells or tissues with the compound so CC that expression of kallikrein 6 by contacting a preferred segment of a nucleic compound so CC colls or tissues with the compound so CC colls or tissues with the compound so CC colls or kallikrein 6, and identifying one or more candidate modulators of kallikrein 6, and identifying one or more candidate modulators CC contact for identifying a disease state by identifying the presence of kallikrein 6 in a sample using any of the primers or probes given in the specification; a kit or assay device comprising the compound; and a CC method of treating an animal having a disease or condition associated CC with by kallikrein 6 administering to the animal a therapeutic or prophylactic amount of the compound so that expression of kallikrein 6 is inhibited. The compound, composition and methods are useful for treating CC inhibited. The compound, composition and methods are useful for treating CC diagnostics for modulating the expression of kallikrein 6. This sequence CC represents a human kallikrein 6 antisense oligonucleotide.
                                                                                                                                                                                                             Query Match

                                                                                           Best Local
                                                                                                             Query Match
                                                                                                                                                                                                                                           specifically hybridises with a nucleic acid molecule encoding AP-2 alpha (19868 bp, SEQ ID NO: 4), and inhibite the expression of AP-2 alpha. Also described are:inhibiting the expression of AP-2 alpha in cells or tissues comprising contacting the cells or tissues with (I); screening for a modulator of AP-2 alpha by contacting a preferred target segment of a nucleic acid molecule encoding AP-2 alpha with one or more candidate modulators of AP-2 alpha, and identifying one or more modulators of AP-2 alpha, and identifying one or more modulators of AP-2 alpha expression, which modulate the expression of AP-2 alpha; a diagnostic method for identifying a disease state; and a kit or assay device comprising (I). The compound is useful for treating an animal having a disease or condition associated with AP-2 alpha, particularly a hyperproliferative disorder. The compounds may be used for diagnostics, therapeutics prophylaxis and as research reagents; or as tools in historial analyses to elucidate expression.
                                                                                                                                                                                   patterns of a portion or the entire complement of gecells and tissues. This sequence represents a human AP-2 antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New compounds targeted to nucleic acid molecules encoding AP-2 alpha and inhibits the expression of AP-2 alpha, useful for treating AP-2 alpha-associated disease or condition, particularly a hyperproliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytostatic; AP-2-Inhibitor-Alpha; AP-2 alpha; AP-2 alpha modulator; AP-2 alpha associated disorder; hyperproliferative disorder; human; transcription factor; antisense oligonucleotide; antisense technology;
                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a compound (I) 8-80 nucleobases in length targeted to a nucleic acid molecule encoding AP-2 alpha. The compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 15; SEQ ID NO 33; 58pp; English.

The compound is an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothicate linkage, at least one modified sugar moiety, preferably a 2'-O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the human Ephrin-B2 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents an antisense oligonucleotide trargeted to DNA encoding the human Ephrin-B2 polypeptide of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a compound targeted to a nucleic acid molecule encoding the human Ephrin-B2 polypeptide. The compound is an antisense oligonuclectide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-O-methoxyethyl sugar moiety, or at least one modified nucleobase comportising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the human Ephrin-B2 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents a human Ephrin-B2 DNA antisense
                           New oligonucleotide compound that inhibits expression of metalloproteinase 11, useful for preparing a composition hyperproliferative disorder, e.g., cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; matrix metalloproteinase 11; MMP11; ss; antisense oligonucleotide; phosphorothioate linkage; 2'-O-methoxyethyl sugar moiety; 5-methylcytosine; hyperproliferative disorder; cancer; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human matrix metalloproteinase 11 DNA antisense oligonucleotide #3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADP27094;

The invention relates to a compound targeted to a nucleic acid molecule encoding a matrix metalloproteinase 11 (MMP11) polypeptide. The compound is an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2.0-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the MMP11 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents a human MMP11 DNA antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoding a matrix metalloproteinase 11 (MMP11) polypeptide. The compound is an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the MMP11 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents an antisense oligonucleotide targeted to DNA encoding the human MMP11 polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New oligonucleotide compound that inhibits expression of matrix metalloproteinase 11, useful for preparing a composition for treating hyperproliferative disorder, e.g., cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; matrix metalloproteinase 11; MMP11; 88; antisense oligonucleotide; phosphorothioate linkage; 2'-O-methoxyethyl sugar moiety; 5-methylcytosine; hyperproliferative disorder; cancer; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human MMP11 DNA antisense oligonucleotide target region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US2004110152-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a compound targeted to a nucleic acid molecule encoding a matrix metalloproteinase 11 (MMP11) polypeptide. The compound
                                                                                                                                                                                                                                                                                                                                                                                                                             Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2004-440341/41.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (ISIS-) ISIS PHARM INC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SXS
                         The invention relates to a method of detecting a nucleic acid with at cleast two portions by providing a type of nanoparticle-oligonuclectide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonuclectides with the two or more portions of the nucleic acid and observing a detectable change brought about by hybridisation. The oligonuclectides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonuclectides on the nanoparticles with the nucleic acid results the oligonucle change. The method is used for detection and separation of nucleic acids (e.g. viral DNA, a gene associated with a disease, bacterial DNA, fungal DNA, synthetic DNA, structurally-modified DNA, DNA the control of various and viral separation and the control of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                      The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticles-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. The method is used for detection and separation of nucleic acids (e.g. viral DNA, a gene associated with a disease, bacterial DNA, fungal DNA, synthetic DNA, structurally-modified DNA, DNA from biological sources or PCR products) for diagnosis of various diseases (such as genetic diseases, bacterial infections and viral infections and viral infections) and for forensics, DNA sequencing, paternity testing and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nanoparticles useful for detection genes associated with disease, in \epsilon oligonucleotides attached to them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mirkin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid detection; nanoparticle-oligonucleotide conjugate; genetic disease; bacterial infection; viral infection; forensic

The invention relates to a compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding NF-kappaB repressing factor (NRF). NF chappaB (nuclear factor kappaB) is involved in such cellular processes as the immune response, inflammatory response, oncogenesis, apoptosis, cell cycle, differentiation and cell migration. The compound (an antisense oligonucleotide) specifically hybridises with the nucleic acid molecule encoding NRF (which appears as ADP74371 and comprises nucleotides 469701 489000 of the X chromosome containing the NRF gene at Xq24-25) and
                                                                                                                                                                                                                                                          New antisense oligonucleotides for modulating expression, useful for diagnosing, preventing conditions involving an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        oncogenesis; apoptosis; chromosome Xq24-25.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ss; antisense;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human NRF antisense oligonucleotide ISIS264065

                          The invention relates to a compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding NF-kappaB repressing factor (NRF). NF-kappaB (nuclear factor kappaB) is involved in such cellular processes as the immune response, inflammatory response, oncogenesis, apoptosis, cell cycle, differentiation and cell migration. The compound (an antisense cligonucleotide) specifically hybridises with the nucleotides acid molecule encoding NRF (which appears as ADP74371 and comprises nucleotides 469701-489000 of the X chromosome containing the NRF gene at Xq24-25) and inhibits the expression of NRF. Also included are inhibiting the expression of NRF in cells or tissues, screening for a modulator of NRF, a diagnostic method for identifying a disease state, a kit or assay device comprising the above compound, and treating an animal having a disease comparising the above compound, and treating an animal having a disease comparising the above compound, and treating an animal having a disease state.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  inhibits the expression of NRF. Also included are inhibiting the expression of NRF in cells or tissues, screening for a modulator of NRF, a diagnostic method for identifying a disease state, a kit or assay device comprising the above compound, and treating an animal having a disease or condition associated with NRF. The antisense oligonucleotide is useful for inhibiting the expression of NRF in cells or tissues to prevent or treat diseases associated with aberrant NRF expression, such as diseases or conditions involving an immune response. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents of kits. The present sequence represents an antisense oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense oligonucleotides for modulating expression, useful for diagnosing, preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2004-440344/41.

Also described are: inhibiting the expression of endothelial lipase in cells or tissues; screening for a modulator of endothelial lipase; a diagnostic method for identifying a disease state; a kit or assay device comprising the above compound; and treating an animal having a disease or condition associated with endothelial lipase, comprising administering to the animal a therapeutic or prophylactic amount of the compound so that expression of endothelial lipase is inhibited. The antisense oligonuclaotide is useful for inhibiting the expression of endothelial lipase in cells or tissues to prevent or treat diseases associated with aberrant endothelial lipase expression, such as cardiovascular disease. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence represents a human endothelial lipase expression of endothelial lipase expressions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antisense therapy; endothelial lipase; endothelial lipase associated disorder; cardiovascular disease; mouse; antisense oligonucleotide; antisense technology; ss.

The invention describes a compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding endothelial lipase. The compound gpecifically hybridises with the nucleic acid molecule encoding conditions are inhibited acid molecule encoding endothelial lipase (which comprises a sequence of 3927 bp fully defined in the specification) and inhibits the expression of endothelial lipase. Also described are inhibiting the expression of endothelial lipase in condition associated for identifying a disease state; a kit or assay device comprising the above compound; and treating an animal having a disease or condition associated with endothelial lipase, comprising the above compound; and treating an animal having a disease or condition associated with endothelial lipase, comprising administering to the animal a therapeutic or prophylactic amount of the compound so that expression of endothelial lipase is inhibited. The antisense collipase in cells or tissues to prevent or treat diseases associated with aborrant endothelial lipase expression, such as cardiovascular disease. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence represents a mouse endothelial lipase antisense oligonucleotide.

Sequence 20 BP; ທ Α, 3 C; 7 G; 5 T; 0 U; 0 Other;

Also described are: inhibiting the expression of endothelial lipase in cells or tissues; screening for a modulator of endothelial lipase; a diagnostic method for identifying a disease state; a kit or assay device comprising the above compound; and treating an animal having a disease or condition associated with endothelial lipase, comprising administering to the animal a therapeutic or prophylactic amount of the compound so that expression of endothelial lipase is inhibited. The antisense oligonucleotide is useful for inhibiting the expression of endothelial lipase expression of endothelial lipase expression, such as cardiovascular disease. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence represents a mouse endothelial lipase expression, such as cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense oligonucleotides for modulating endothelial lipase expression, useful for diagnosing, preventing or treating diseases associated with aberrant endothelial lipase expression, e.g.
                                                                                                                                                                                                                                                                                                         25-MAR-2003

                                                         A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GRNESEQ files AAQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic polypeptide(s) contg. specified heptad units - exprise in plants to serve as custom-tailored storage proteins specified aminoacid content.
